Storage Solutions for **MUSEUMS & HERITAGE**

PROTECTING our Heritage

Collections of artefacts, books, manuscripts, works of art and other collectables, whether within public galleries and museums or private collections all require specialist knowledge and expertise in their handling and storage to ensure they are preserved for future generations to enjoy.

The design, manufacture and installation of the systems used to store collections should therefore be trusted which provide tailored, secure storage for current collections and also accommodate future growth.

Storage for Small Items

- Small items, many of which are of great value, require a storage solution that offers protection and security; flexibility to change with the collection; accessibility to the items stored; a choice of storage surfaces; the ability to handle a mixture of exhibits.
- With a choice of shelving systems, accessories, drawer units, glass display units, space saving mobile systems there is no item that cannot be stored correctly

Storage for Large Items

- For the storage of large or heavy objects there is an extensive range of shelving and racking. All offer easy access and a choice of metal or wood shelving materials. Where required non toxic or poly-carbon shelf materials can be specified.
- For where space is at a premium our mobile systems will help you maximise your capacity whilst retaining easy access to the exhibits stored.

PRESERVING HISTORY

Storage for Pictures, Textiles & Clothing

• With unlimited variation in size, but with minimal depth, the safe storage of a large collection of paintings, pictures or textiles presents a different problem. The solution is a system of mesh racks suspended from the ceiling or from a self-supporting structure. Using smooth running tracks, energy absorbing buffers and self braking systems these racks offer a high density and safe storage facility that can be extended when required.

here are two types of modular picture racking and the choice of system depends heavily on the location and construction of the storage space available. The two types are:

Mobile base mounted

- Most space efficient system
- Least intrusive to fabric of the building
- Can be integrated into other storage types (i.e. it can be next to mobiles with shelves on for storage of different types)
- Easiest to relocate
- Lockable

Overhead supported with concealed floor guide (Pull out)

- Best aesthetics
- Unobstructed access in walkways
- Eliminates weight bearing on floors
